

Cauliflower

History

Cauliflower originally was grown in Asia around the Mediterranean Sea. Cauliflower has been grown and eaten across Europe since the 1500's, but didn't start growing in the United States until the 1900's.

Today, California produces the more cauliflower than any other state. Cauliflower is grown in the Salinas Valley of California – also called the “Salad Bowl of the World.” The growing season can last 10 months due to its moderate climate and rich soil. Other states that grow cauliflower include Arizona, Florida, Michigan, New York, Oregon, Texas, and Washington. Cauliflower is grown in Wisconsin and can be found at farmers markets in September and October.

Veggie Science

Cauliflower closely resembles broccoli in appearance – the biggest difference being cauliflower's white coloring. Cauliflower remains white due to protective leaves growing around the head. The leaves shield the head from the sun, preventing the formation of chlorophyll, and keeping the head from turning green. Cauliflower can be found in different color varieties including purple.

Fun facts
